PROFILE SUMMARY

Results-oriented DevOps Engineer with hands-on expertise in **AWS, Azure, Docker, Kubernetes, Terraform, Jenkins, Ansible**, and **CI/CD automation**. Skilled in setting up scalable infrastructure, implementing GitOps workflows, and automating deployments using modern DevOps tools. Passionate about improving system reliability and enabling rapid delivery pipelines through **containerization, infrastructure-as-code**, and **continuous monitoring**.

TECHNICAL SKILLS

Category	Tools & Technologies
Cloud Platforms	AWS, Azure
Container Technologies	Docker, Kubernetes
Infrastructure as Code	Terraform
CI/CD Tools	Jenkins, GitHub Actions, Argo CD, Azure Pipelines
Version Control	Git, GitHub
Scripting	Shell, Python
Configuration Management	Ansible
Observability &Monitoring	Prometheus, Grafana
Operating Systems	Linux (Ubuntu, Amazon Linux)

PROFESSIONAL EXPERIENCE

Currently Working as **DevOps Engineer** in **mmmmmmmmmmmmm** from **Sep-2020**

PROJECTS

Project #3: ING Bank
Designation: DevOps Engineer
Duration: Nov 2024 – **Tools**
& Technologies:
Jenkins, GitHub Actions, Azure DevOps, Docker, Kubernetes (EKS, AKS), Helm, Terraform, Argo CD, SonarQube, Trivy, Prometheus, Grafana, Ansible, AWS (EC2, RDS, VPC, IAM, Secrets Manager), Docker Hub, kubectl, GitHub, and GitOps.

Description:
Worked on ING Bank's **digital banking platform** to enhance the automation, scalability, and security of the cloud infrastructure. The goal was to implement a robust **DevOps pipeline** that streamlined build, testing, deployment, and monitoring of banking microservices running across multi-environment Kubernetes clusters on **AWS and Azure**.

Roles & Responsibilities:

- Implemented **CI/CD pipelines** using **Jenkins and GitHub Actions** for automated build, test, and deployment of multiple microservices (Account, Transactions, Payments).

- Containerized Node.js, Java, and Python-based services using **Docker**, following best practices for security and efficient image layering.
- Orchestrated containers using **Kubernetes (EKS & AKS)** to ensure high availability, auto-scaling, and zero-downtime deployments.
- Used **Terraform** to provision AWS infrastructure, including VPCs, subnets, EC2 instances, security groups, IAM roles, and RDS for data storage.
- Configured **Argo CD** for GitOps-based deployment, automating environment synchronization between staging and production clusters.
- Integrated **SonarQube** and **Trivy** into CI pipelines for continuous code quality and vulnerability scanning.
- Designed and implemented **Helm charts** to manage modular microservice deployments with version control.
- Automated application build and release workflows in **Azure DevOps**, integrating with Docker Hub and Kubernetes.
- Deployed monitoring and alerting systems using **Prometheus and Grafana** to track pod health, API latency, and error rates.
- Used **Ansible** for configuration management and to automate server setup, patching, and deployment tasks.
- Managed secrets and configurations securely using **AWS Secrets Manager** and **Kubernetes ConfigMaps/Secrets**.
- Debugged deployment and scaling issues using **kubectl**, container logs, and Kubernetes dashboard insights.
- Collaborated with developers to integrate CI/CD into the existing workflow, improving deployment frequency and reducing rollbacks by 40%.
- Maintained documentation for pipeline architecture, deployment processes, and infrastructure automation scripts.
- Optimized cost and resource utilization by implementing **auto-scaling policies** and **spot instance usage**.
- Ensured **disaster recovery and rollback strategies** were automated using Terraform state management and GitOps version control.

Project #2: Vision

Designation: DevOps Engineer **Duration:**

Mar 2022 – Oct 2024

Tools & Technologies:

Jenkins, GitHub Actions, Docker, Kubernetes (EKS), Helm, Terraform, Argo CD, SonarQube, Trivy, AWS (EC2, S3, RDS, VPC, CloudFront, ECR, Secrets Manager, CloudWatch, SNS), Prometheus, Grafana, NGINX Ingress, and GitOps.

Description:

Worked on the **Vision Express eCommerce platform**, a large-scale web application enabling customers to browse, customize, and purchase eyewear products such as eyeglasses, sunglasses, and contact lenses. My focus was to automate the infrastructure provisioning, containerize services, and implement a secure CI/CD pipeline to improve deployment speed, scalability, and reliability across environments (dev, staging, production).

Roles & Responsibilities:

- Designed and implemented a **CI/CD pipeline** using **Jenkins and GitHub Actions** to automate build, testing, and deployment of frontend and backend microservices.
- Containerized the React frontend and Node.js backend using **Docker**, ensuring consistent and reproducible deployments across development environments.
- Provisioned scalable infrastructure using **Terraform** on **AWS** — including VPC, EC2, S3, RDS, and CloudFront for content delivery.
- Orchestrated containers using **Kubernetes (EKS)** to achieve zero-downtime deployments and dynamic scaling based on traffic loads.

- Deployed **NGINX Ingress Controller** for routing and load balancing traffic across frontend and backend pods.
- Configured **Helm charts** for modular deployment, version management, and environment-specific configurations.
- Integrated **SonarQube** and **Trivy** into pipelines to automate code quality and vulnerability scanning before deployment.
- Automated build artifact versioning, tagging, and image pushes to **AWS Elastic Container Registry (ECR)**.
- Implemented **GitOps** with **Argo CD** for declarative and version-controlled Kubernetes deployments.
- Configured **Prometheus** and **Grafana** dashboards to monitor system health, request latency, and pod resource usage.
- Utilized **AWS CloudWatch** and **SNS notifications** for log aggregation and proactive alerting.
- Collaborated with developers and QA teams to ensure smooth integration of CI/CD workflows into the SDLC.
- Optimized release cycles by automating rollback strategies and blue-green deployment workflows in Kubernetes.
- Managed **secrets and environment variables** securely using AWS Secrets Manager and Kubernetes Secrets.
- Documented infrastructure setup, deployment processes, and DevOps workflows for future scalability and maintenance.

Project #1: Nokia)
Designation: DevOps Engineer **Duration:**
Sep 2020 – Feb 2022

Tools & Technologies:
Jenkins, GitHub Actions, Docker, Kubernetes (EKS), Terraform, Argo CD, SonarQube, Trivy, Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), AWS (CloudWatch, Route 53, Secrets Manager), Helm, Cert-Manager, GitOps, and NGINX Ingress.

Description:

The **Nokia ICM Portal** is an enterprise-scale platform used for managing and automating network configurations across Nokia's telecom infrastructure. As a DevOps Engineer, I was responsible for designing and maintaining the **CI/CD pipelines**, automating infrastructure provisioning, and ensuring high availability through **containerized deployments** and **monitoring systems**. The goal was to enhance reliability, scalability, and deployment efficiency while reducing manual configuration errors in multi-environment setups.

Roles & Responsibilities:

- Designed and implemented **end-to-end CI/CD pipelines** using **Jenkins** and **GitHub Actions** to automate code build, testing, image creation, and deployment across development and production environments.
- Containerized microservices (frontend, backend, and monitoring modules) using **Docker** and managed deployments using **Kubernetes (EKS)**.
- Automated cloud resource provisioning and configuration using **Terraform**, ensuring repeatable and version-controlled infrastructure.
- Integrated **SonarQube** and **Trivy** within CI pipelines to perform automated **code quality analysis** and **security vulnerability scanning**.
- Implemented **GitOps workflows** using **Argo CD**, enabling automated deployments triggered by repository changes for improved version control and rollback.
- Deployed and maintained **monitoring dashboards** with **Prometheus** and **Grafana**, visualizing node health, API latency, and deployment metrics for proactive incident management.
- Configured centralized **log management and alerting** using **ELK Stack (Elasticsearch, Logstash, Kibana)** and **AWS CloudWatch**, improving issue traceability across services.

- Developed **Helm charts** for modular Kubernetes deployment and parameterized configurations for different environments (QA, Staging, Production).
- Automated SSL certificate renewal and DNS management using **Route 53** and **Cert-Manager** for secure communication across clusters.
- Worked closely with backend and network teams to containerize legacy components, reducing deployment time from hours to minutes.
- Managed **secret handling and environment variables** securely using **AWS Secrets Manager** and **Kubernetes Secrets**.
- Optimized build times and resource utilization through **parallel pipeline execution** and **caching strategies** in Jenkins.
- Configured **blue-green deployment** and **canary release strategies** to ensure zero downtime during production rollouts.
- Collaborated with QA and security teams to integrate automated tests and vulnerability scans into the deployment process.
- Documented all DevOps workflows, architecture diagrams, and deployment steps to ensure transparency and maintainability.

EDUCATION DETAILS

B.Tech in Electronics and Communication Engineering
BML Munjal University, Kapriwas,Haryana **Duration:**
2015 – 2019

DECLARATION

I hereby declare that above mentioned particulars are true to the best of my knowledge and beliefs.
