Professional Summary

- Over 6+ years of experience designing, implementing, and managing CI/CD pipelines using Azure DevOps, Git, and YAML-based pipelines.
- Expertise in source code management, branching strategies, pull requests, and repository management with Azure Repos and GitHub.
- Skilled in automating build, release, and deployment processes for web, API, and cloud applications across multiple environments.
- As an SRE, responsible for performing Ops work as well as understanding development needs and support accordingly by having continuous coordination with Development and R&D teams.
- Hands-on experience with Infrastructure as Code (IaC) using ARM templates, Terraform, and PowerShell scripting for automated provisioning.
- Proficient in monitoring and managing Azure resources, including App Services, Virtual Machines, Azure Functions, and Azure Kubernetes Service (AKS).
- Experienced in implementing Site Reliability Engineering (SRE) practices: monitoring, alerting, log management, and performance optimization.
- Strong collaboration with development, QA, and operations teams to ensure end-to-end delivery and maintain high-quality releases.
- Skilled in troubleshooting build/release failures, optimizing pipeline performance, and driving continuous improvement in DevOps processes.

Education

- B. Tech **f**rom JITS in 2015.

Work Experience

- NACHA, Virginia(June 2023-Present)
- Fannie Mae, Virginia(Jan 2022-May2023)
- Discover Financial, Chicago, IL(March 2019-December 2021)

Skills

- Azure DevOps
- AKS (Azure Kubernetes Service)
- Docker
- Jenkins
- Git / GitHub
- ARM Templates
- Terraform
- PowerShell

- Python
- YAML
- Application Insights
- Log Analytics
- Prometheus & Grafana
- Azure SQL / Cosmos DB
- Ansible

Projects

Project: Nacha

Description: Nacha, originally the **National Automated Clearinghouse Association**, manages the ACH Network, the backbone for the electronic movement of money and data in the United States, and is an association for the payments industry. The ACH Network serves as a network for direct consumer, business, and government payments, and annually facilitates billions of payments such as Direct Deposit and Direct Payment. The ACH Network is governed by the Nacha Operating Rules.

Roles and Responsibilities:

- Automated provisioning of Azure resources using Bicep templates, enabling rapid lab environment setup for research workloads.
- Configured CI/CD pipelines to validate medical data ingestion workflows with dynamic approval gates in Azure DevOps.
- Integrated Azure Key Vault with pipeline secrets rotation for HIPAA and GxP compliance.
- As an SRE, responsible for performing Ops work as well as understanding development needs and support accordingly by having continuous coordination with Development and R&D teams.
- Established multi-stage release gates incorporating SonarQube and OWASP scanning to ensure application security.
- Deployed Azure Container Apps for microservices supporting digital pathology analytics.
- Implemented audit trails in Azure Monitor and Log Analytics to satisfy regulatory requirements.
- Orchestrated hybrid connectivity between on-prem lab servers and Azure using ExpressRoute and Private Endpoints.
- Automated certificate renewal via Azure Automation and Key Vault for secure data exchange services.
- Created reusable YAML pipeline templates for consistent CI/CD implementation across research divisions.

Project 2: Fannie Mae

Description: The **Federal National Mortgage Association** (**FNMA**), commonly known as **Fannie Mae**, is a United States government-sponsored enterprise (GSE) and, since 1968, a publicly traded company. Founded in 1938 during the Great Depression as part of the New

Deal, the corporation's purpose is to expand the secondary mortgage market by securitizing mortgage loans in the form of mortgage-backed securities (MBS), allowing lenders to reinvest their assets into more lending and in effect increasing the number of lenders in the mortgage market by reducing the reliance on locally based savings and loan associations (or "thrifts"). Its brother organization is the Federal Home Loan Mortgage Corporation (FHLMC), better known as Freddie Mac.

Roles and Responsibilities:

- Designed and managed build and release pipelines using Azure DevOps.
- Implemented YAML-based pipelines for automated deployments across environments.
- Automated infrastructure provisioning using ARM templates and Terraform.
- Managed source code, branching strategies, and pull requests with Git/GitHub.
- Containerized applications using Docker and deployed on AKS.
- Configured monitoring and alerting using Application Insights and Log Analytics

Project 3: Discover Financial
Description: Discover Financial Services, Inc. was an American financial services company best known for its Discover Card. Founded in 1985, the company offered a wide range of banking and payment services, including checking and savings accounts, personal loans, home equity loans, and credit cards. It owned and operated the Discover and Pulse, and owned Diners Club International. Discover Card is the third largest credit card brand in the United States, when measured by cards in force, with nearly 50 million cardholders.

Discover was acquired by Capital One on May 18, 2025. As a result of the acquisition, all Discover Financial brands would be offered as the Capital One brands and services.

Roles and Responsibilities:

- Onboarding different projects into DevOps ways of working by implementing **CI/CD** pipelines using **Jenkins, Docker** and **Ansible.**
- Configured and maintained **Jenkins** to implement the CI process and integrated the tool with **Maven** to schedule the builds and deployment.
- Working on **Gitlab global request queue**.
- Handle multiple builds from Development team, create build jobs in Jenkins and perform deployment activities.
- Automate the **Maven** build Process Using **Jenkins Pipeline jobs**.
- Experience with windows Server, MS SQL and VM ware vSphere infrastructure
- Understanding with Citrix cloud and Azure IaaS.
- Verifying the logs if build fails.
- Verify Deployments logs to check for successful deployments.
- Detecting the root cause of issues with the help of functional knowledge and rectifying by providing the fix (Code/Enhancement).

- Using **Visual Studio Code** and **Atom** editor part of my daily code developments related to DevOps work.
