CAREER SUMMARY

Results-driven DevOps Engineer with hands-on expertise in Automation and Orchestration technologies, including Azure DevOps, Docker, and Kubernetes. Passionate about continuous learning and innovation, with a proven ability to rapidly absorb complex technical concepts and translate them into impactful DevOps solutions. Known for a strong work ethic, proactive mindset, and a collaborative spirit, I thrive in dynamic environments where adaptability and clear communication are key to success. Committed to driving operational efficiency, scalability, and reliability across development pipelines.

EXPERTISE

Azure DevOps | CI/CD Pipelines | Containerization | OpenShift | Version Control & Collaboration | Scripting & Configuration | Collaboration & Agile Delivery

TECHNICAL SKILLS

Azure DevOps Pipelines | CI/CD | Git | Docker | Podman | OpenShift | PowerShell | Bash | Groovy | Ansible | SolarWinds | CA Spectrum | Nginx | SQL | Automation | ServiceNow | YAML | SonarQube | Veracode

PROFESSIONAL EXPERIENCE

SENIOR CONSULTANT | | Chennai, India Oct 2024 – present

- Provided strategic guidance to cross-functional teams on DevOps best practices, optimizing toolchains, and accelerating cloud-native adoption.
- Optimized container POC using diverse OpenJDK 21 base images, including Alpine and IBM variants. Achieved a 30% reduction in container startup time and significantly improved memory utilization across microservices.
- Driven end to end solution to implement Parallel deployment integrating with DevSecOps accelerator with self-hosted agent
- Performed DevOps maturity assessments and crafted actionable roadmaps to drive continuous improvement across development and operations.
- Led a team of 6 DevOps engineers in architecting and deploying robust CI/CD pipelines for multiple enterprise-level projects.
- Integrated static and dynamic code analysis tools such as SonarQube and Veracode into CI/CD workflows to enhance code quality and security.
- Automated the update of secret keys and values in Azure Key Vault via Azure DevOps pipelines.
- Leveraged Azure CLI and PowerShell scripting to dynamically manage secrets during deployment phases, ensuring secure and seamless delivery.
- Embedded Key Vault operations into CI/CD processes to eliminate manual handling and mitigate credential exposure risks.
- Developed PowerShell scripts to automate SonarQube report generation, streamlining code quality monitoring.

CONSULTANT | | Chennai, India May 2022 – Oct 2024

- Engineered automation scripts using PowerShell and Groovy, reducing manual tasks by 70% and accelerating deployment timelines.
- Engineered 8 modular YAML templates for CI/CD workflows, optimizing processes for code quality, build, deployment, and regression stages. This initiative cut pipeline code by over 50%, enhancing maintainability and scalability.
- Streamlined build processes for Java and Angular applications through Maven and Node.js tooling, enhancing development efficiency.
- Designed and implemented YAML-based CI/CD pipelines in Azure DevOps, achieving a 50% improvement in deployment speed.
- Utilized Docker images and Docker files to automate development workflows, minimizing errors and boosting team productivity.
- Authored detailed documentation of DevOps practices and procedures, enabling smooth onboarding and fostering team-wide consistency.
- Adopted Azure Repos for source control, enhancing collaboration, code quality, and version management across projects.
- Integrated SonarQube into the development lifecycle, improving code security and reducing vulnerabilities by 20%

- Automated deployment of lower environments (e.g., dev) using Webhooks, eliminating manual steps and increasing delivery efficiency.
- Established centralized package management via Azure Artifacts, cutting build times by 40% and improving developer throughput.
- Administered secrets, certificates, and access controls using Azure Key Vault, reinforcing security across deployment pipelines.

SYSTEM ENGINEER | | Chennai, India May 2019 – May 2022

- Led the architecture design and implementation of SolarWinds infrastructure monitoring solutions for clients across North America, Oceania, and Europe.
- Successfully completed two full-scale implementations within one month each, including tool migration and ongoing support.
- Configured high availability for SolarWinds to minimize outage durations and integrated with ServiceNow and other ticketing platforms for automated incident creation.
- Took initiative to develop custom dashboards for support teams using SQL and SolarWinds Query Language (SWQL), enabling faster issue identification and resolution.
- Demonstrated deep expertise in SNMP traps, event correlation, and syslog analysis to deliver accurate root cause investigations for infrastructure monitoring issues.
- Set up alerting and reporting mechanisms, performed upgrades, and applied hotfixes to ensure optimal performance of monitoring applications.
- Diagnosed and resolved issues with monitoring agents across both Linux and Windows environments, ensuring consistent data collection and system visibility.

EDUCATION

B. Tech | Electronics and Communication Engineering | SRM Institute of Science and Technology 2015 – 2019
