Experienced Azure DevOps Engineer with 3+ years of experience in designing and implementing CI/CD pipelines, automating infrastructure with Terraform, and managing containerized workloads with Kubernetes and Docker. Skilled in optimizing deployments on Azure Cloud to ensure high availability, scalability, and security. Strong background in Infrastructure as Code (IaC), monitoring, and automation to accelerate software delivery and improve operational efficiency.

Education:

BTech – Computer Science and Engineering | SCSVMV University, Kanchipuram | CGPA 8.9

Intermediate - MPC | Abhyaas Jr. College, Guntur | Percentage 87%

Certifications:

- **Microsoft certified:** Azure Fundamentals (Az-900)
- **Microsoft certified:** Azure Administrator Associate (Az-104)
- **Microsoft certified:** Azure Developer Associate (Az-204)

Technical Skills:

Cloud Technologies	Azure, AWS
CI/CD Tool	Azure DevOps
Containerization	Docker
Orchestration	Kubernetes
Infrastructure as Code	Terraform
Version Control	Git, GitHub
Monitoring & Logging	Azure Monitor, Prometheus, Grafana
Operating Systems	Windows, Linux, Ubuntu

Professional Experience:

HCL Technologies Ltd, Chennai

PROJECT – ANGLO AMERICAN **October 2022 – PRESENT**

- Designed and optimized **CI/CD pipelines** in **Azure DevOps**, reducing deployment time by 40% and improving release reliability by 30% across environments.
- Designed and implemented modular, reusable **Terraform modules** to provision and manage scalable Azure infrastructure including **Azure Container Registry (ACR**) and **Azure Kubernetes Service (AKS)** enhancing deployment speed, consistency, and scalability.
- Configured Terraform **remote backend** with Azure Storage Account to securely manage state files, enabling team collaboration, environment consistency, and reliable multi-environment infrastructure provisioning.
- Built **multi-stage Docker files** for microservices using Flask, .NET, Java, and Node.js, reducing image size by 45% and accelerating container deployment.
- Streamlined **CI/CD workflows** by automating container image builds and pushes to Azure Container Registry (ACR), enhancing deployment speed, consistency, and reliability across multiple environments.
- Deployed containerized applications to **Azure Kubernetes Service (AKS)** using **YAML** manifests (Deployments, Services, ConfigMaps, Secrets, and Ingress), enabling **load balancing**, auto-scaling, and secure HTTPS routing.
- Managed Kubernetes **Deployments** and **ReplicaSets** to run containerized production workloads with auto-scaling and high availability, proactively diagnosing pod and node-level issues to ensure uptime and stable application performance.
- Implemented **Prometheus** and **Grafana** monitoring for AKS, cutting incident response time by 50% and improving uptime visibility.
- Enhanced AKS observability by integrating **Azure Monitor** and **Log Analytics** to achieve end-toend visibility into infrastructure, application logs, and performance metrics, enabling deeper insights and faster issue resolution.
- Deployed and managed **Azure IaaS resources**, including provisioning and resizing Virtual Machines (VMs), and configuring Virtual Networks, Subnets, and Network Security Groups (NSGs).
- Implemented **Virtual Network Peering**, **Internal Load Balancers**, and custom network configurations to ensure secure communication and high availability across Azure resources.
- Managed Azure Storage solutions (**Blob, File, and Managed Disks**) and configured Azure Backup and **Recovery Services Vaults (RSVs)** to ensure data protection and business continuity.
